

Index

Page numbers followed by the letter n indicate entries in notes.

- Acemoglu, Daron, 156, 160(n16)
- Achieving Universal Primary Education by 2015: A Chance for Every Child* (Bruns, Mingat, and Rakotomalala), 72–73, 110–111, 114–115, 137–138
- Adult population: attainment levels, 48–51, 49(table); average years of education, 48(fig.); base case forecast for adult education attainment, 86–87, 88(fig.); base case forecast of highest education attainment level of adults, 164(fig.); gender balance in attainment, 50; gender parity and years of education, 51(fig.); gender parity ratio in adult populations, 50(fig.); global advance of education, 162; history and forecast of adult attainment, 90(table); literacy in the adult population, 50–51, 51(fig.); multistate demographic method, 74–75; parental education affecting student success, 120
- Afghanistan: gender parity ratio, 111; tertiary level gross enrollment rate, 2
- Age: adjusted primary net intake, 70(box); age/sex/education distribution for Albania and Bolivia, 20(fig.); attainment levels, 19–20; base case forecast of dependent age categories as percent of total global population, 165(fig.); decline of youth share in population, 165–166; population effects of fertility and mortality rates, 154; primary intake rates by age categories, 70(table). *See also* Adult population
- AIDS: 10
- Albania: age/sex/education distribution, 20(fig.)
- Allison, Graham, 77(n20)
- Alva, Soumya, 160(n13)
- Alvarez, Benjamin, 9(n11)
- American Academy of Arts and Sciences, 5
- Anastasion, Daniele, 154
- Angola: calculated incremental costs of education acceleration, 135
- Appiah, Elizabeth, 77(n26), 157
- Arab States: adult attainment, 49; base case forecast for adult attainment, 87; base case forecast for education spending, 85–86; child mortality rate, 35; comparing costs and benefits of the normative scenario with the base case, 145–146; distribution of female and male gender parity and gaps, 32(fig.); enrollment analysis, 42; enrollment rate expansion, 25; history and forecast for education progress, 91; literacy in the adult population, 51; public spending, 44; pursuing gender parity in enrollment rates, 29; role of economic development in expanding participation, 35; sociopolitical context, 36–37; state instability, 37; UPE target dates, 133. *See also* Regional data
- Assessing quality of education. *See* Quality of education
- At-risk children, 14
- Attainment: adult attainment in sub-Saharan Africa and DRC in 2060: normative scenario relative to base case, 130(fig.); adult populations, 48–51; affecting sociopolitical change, 166; age/sex/education distribution for Albania and Bolivia, 20(fig.); assessing education quality through, 109(box); attainment differences between the normative scenario and the base case for South and West Asia and sub-Saharan Africa, 126(fig.); base case and normative scenario differences, 126–127; base case forecast for adult education attainment, 86–87, 88(fig.); base case forecast of average years of education under optimistic and pessimistic dynamic assumptions, 102(fig.); base case forecast of highest completed level of education by those age 12, 163(fig.); base case forecast of highest education attainment level of adults, 164(fig.); characteristics and measures of, 19–20; conceptual foundations, 16–17; defining attainment, 53(n24); education flows, 17(fig.); forecasts of, 86–87, 88(fig.), 95–96, 102(fig.); gender balance in adult education attainment, 50; global advance, 162; history and forecast of adult attainment, 90(table); IFs education model approach, 60–61, 63; multistate demographic method, 75; student flow patterns, 18(fig.); sub-Saharan attainment gap, 167
- Base case forecasts of IFs: adult education attainment, 86–87; analysis of Burkina Faso as example of IFs integrated approach, 94–95; comparing IFs forecasts with those of others: 89, 91–94; countries missing current MDG goals, 82–83, 83(table); dependent age categories as percent of total global population, 165(fig.); economic growth, 97; education spending as percent of GDP, 85–86; education spending by education level, 86; enrollment rates for countries outside sub-Saharan Africa with low secondary enrollment, 83(fig.); expansion of education, 79–81; exploring major dimensions of uncertainty, 86–92; gender parity, 83–85; gender parity enrollment rate ratios, 84(fig.); global advance of education, 162; gross enrollment rates by region and education level, 80(fig.); highest completed level of education by those age 12, 163(fig.); highest education attainment level of adults, 164(fig.); human development–education linkage, 78–79; lifetime educational prospects of African children, 162; optimistic and pessimistic framing scenarios, 100–102; population by age, sex, and level of completed education in India and China, 88(fig.); primary and secondary net enrollment rates by region, 81(table); primary net enrollment rates in sub-Saharan country clusters, 82(fig.); sociopolitical effects of education advance, 156; targeting countries with below 50 percent primary enrollment, 81–82; UPE by 2015 not a feasible goal, 82
- Baldacci, Emanuele, 144
- Bangladesh: high enrollment rate growth, 110; IFs grade flow data and simulation, 62, 62(fig.); survival rates, 131
- Barrera, Albino, 160(n13)
- Barro, Robert, 20(fig.), 23(n12), 48–49, 53(n26), 143–144
- Barrow, Karima, 24, 52(n1), 56, 74, 77(n31), 92–93, 103(n16, n17), 110

- Basic education: defining, 5; duration of primary and secondary levels of education, 22(table); global advance of, 162; Jomtien Declaration, 3; Latin America and the Caribbean, 132; literacy and, 89. *See also* Primary level education; Secondary level education, lower
- Bates, Robert, 37
- Batra, Poonam, 4(box), 15(box), 47(box)
- Becker, Gary, 23(n3), 150
- Benin: low intake/high survival rates, 107–108, 107(fig.); rapidly closing gender gap, 111
- Binder, Melissa, 98, 116
- Birdsall, Nancy, 11, 52(n17), 120
- Bloom, David, 5, 23(n11, n12), 52(n1), 103(n12), 153
- Bolivia: age/sex/education distribution, 20(fig.)
- Bosworth, Barry, 144
- Botswana: high enrollment rate growth, 110; rapidly closing gender gap, 111
- Bottom-up spending analysis, 114–115
- Boys. *See* Gender
- Bradsher, Monica, 9(n11)
- Brazil, 132
- Bruns, Barbara, 56, 72–73, 77(n27), 98, 110–111, 114–115, 121(n12, n13), 137–138, 141(n5)
- Brundtland, Gro, 57
- Buchmann, Claudia, 15–16, 23(n7), 147–148, 150, 156, 160(n1, n16)
- Burkina Faso: comparing forecasts of primary net enrollment rates in 2025, 93(table); history and forecast of enrollment rates, 93–95; rapidly closing gender gap, 111; teacher salaries, 115
- Burundi: comparing forecasts of primary net enrollment rates in 2025, 93(table); history and forecast of enrollment rates, 93; state instability leading to slowing or reversal of enrollment gains, 82
- Caldwell, John, 23(n17), 151–152, 155
- Cambodia: gender parity ratio, 29
- Canning, David, 153
- Carrol, Bidemi, 24, 52(n1), 56, 74, 77(n31), 92–93, 103(n16, n17), 110
- Case, Anne, 152
- Castelló-Climent, Amparo, 160(n17)
- Castro-Martín, Teresa, 150–151
- Center for Global Development, 73–74
- Central African Republic: gender parity ratio, 111; state instability leading to slowing or reversal of enrollment gains, 82
- Central and Eastern Europe: base case forecast for adult attainment, 87; base case forecast for declining education spending, 85; Cold War expansion of education, 34; distribution of female and male gender parity and gaps, 32(fig.); duration of primary and secondary education, 23; gender parity in secondary levels, 53(n3); literacy in the adult population, 50; public spending, 44; role of economic development in expanding participation, 35–36. *See also* Regional data
- Central Asia: distribution of female and male gender parity and gaps, 32(fig.); enrollment rate patterns, 27–28; literacy in the adult population, 50; role of economic development in expanding participation, 35–36; spending bubbles in the normative scenario, 135. *See also* Regional data
- Chad: gender parity ratio, 111; low intake/low survival rates, 107(fig.), 108
- Chandola, Tarani, 160(n13)
- Chen, Derek, 143
- China: base case forecast for adult attainment, 87, 88(fig.); base case forecast for education spending, 86; forecasting economic growth, 97; government effectiveness as benefit of education, 157; public spending, 53(n16), 118; sociopolitical effects of education advance, 156; UPE strategy, 4
- Cincotta, Richard, 154
- Clemens, Michael, 9(n9), 23(n1, n5), 24, 52(n1), 56, 65, 73–74, 92, 92(table), 103(n17), 104–105, 110
- Cohen, Daniel, 23(n12), 48–49, 53(n26), 143
- Cohen, Joel, 5, 103(n12)
- Cold War, 78
- Collins, Susan, 144
- Colonialism, 12–13, 78
- Commission on Macroeconomics and Health (CMH), 138–139
- Comoros: gender parity ratio, 111; low intake/high survival rates, 107–108, 107(fig.)
- Completion rates: assessing education quality through, 109(box); entry and completion analysis, 74; intake rates in high-growth countries, 110; per student spending across low-income countries, 115; student flow patterns, 17–18. *See also* Attainment
- Compulsory education, 11, 22(table), 23(n15, n16, n17)
- Coombs, Philip, 52(n15), 121(n9)
- Corruption: disappearance of education funds, 115–116; perception of corruption in sub-Saharan Africa, 41–42; relationships of sociopolitical variables with GDP per capita at PPP and education, 155(table); sociopolitical benefits of education, 157–158; sociopolitical measures, 36–37
- Corruption Perceptions Index, 158
- Costa Rica: military spending, 147
- Cost-benefit analysis: accounting-centric approach to education analysis, 56; estimating break-even point of costs of accelerating education's advance, 147; exploratory model desirable characteristics, 55; increased domestic and foreign spending, 138–140; normative scenario, 105, 145–147, 166; targeting primary at the cost of secondary education, 107. *See also* Normative scenario of education advancement
- Costs of education: education costs as percent of GDP: history and forecasts, 136(fig.); IFs education model, 60; opportunity costs, 14. *See also* Public spending
- Côte d'Ivoire: gender parity ratio, 111; state instability leading to slowing or reversal of enrollment gains, 82
- Country-level analysis, 6–7, 65–67
- Cowell, Richard, 9(n11)
- Crespo-Cuaresma, Jesús, 23(n11)
- Cross-sectional analyses of education (uses of), 56, 65
- Cuadra, Ernesto, 9(n11), 98, 107, 116, 121(n16)
- Cuba: high intake rate despite low GDP per capita, 65(fig.), 66; primary level spending, 115–116
- Cultural change through education's advance, 155
- Currais, Luis, 153
- Curry, Helen, 103(n12)
- Cutright, Phillips, 156
- Dahlman, Carl, 143
- Dakar Framework for Action (2000), 3, 5, 9(n7), 45, 108
- Data collection, 3, 27, 69–71, 77(n11, n12, n13, n22)
- Delamonica, Enrique, 56, 72, 77(n27)
- Demand for education: balancing supply and, 61; forecasting models and tools, 55–56; IFs education model, 60(fig.), 63–64, 68, 94; impact of human development system on, 13–14; limiting education expansion, 79
- Democratic Republic of Congo: adult attainment in sub-Saharan Africa and DRC in 2060: normative scenario relative to base case, 130(fig.); calculated incremental costs of education acceleration, 135; enrollment rates: normative scenario relative to base case, 129(table); gender parity ratio, 111; impact of education on fertility rates, 151; low intake/high survival rates, 107–108, 107(fig.); political turmoil reversing education gains, 128–129; state instability leading to slowing or reversal of enrollment gains, 82
- Democratization: as benefit of education advance, 155–156; IFs sociopolitical model, 59; outside sub-Saharan Africa, 42; polity measure of democracy, 37(fig.); relationships of sociopolitical variables with GDP per capita at PPP and education, 155(table); sociopolitical and demographic benefits of education's advance, 15, 36–37
- Demographics: affecting education supply and demand, 14; bidirectional connections with education, 13; demographic transition, 10–11; education impact on fertility, 150–152;

- education–human development linkage, 165–166; exploratory model desirable characteristics, 55; facilitating education advancement, 52; IFs demographic model, 57–58, 68; need for extra funding for low-income societies, 166; role in expanding participation, 34–35; student headcount, 123, 125(table)
- Demographic transition: dependent age categories as percent of total global population, 165(fig.); shaping education progress, 34–35, 79; sociopolitical, demographic, and economic links to education, 11(fig.)
- Desai, Sonalde, 160(n13)
- Development economics, 12
- Development policy, 105
- Development studies, 12
- Dewey, John, 155
- Diamond, Ian, 151
- Djibouti: gender parity ratio, 29, 111; tertiary level gross enrollment rate, 2
- Dominican Republic: private funding for primary education, 116
- Dropout rate, 17, 18(fig.), 75
- Duration of education by level, 22–23
- Durkheim, Emile, 156
- Durlauf, Steven, 143
- East Asia and the Pacific (poorer): base case forecast for education spending, 86; cost-benefit comparison of the normative scenario with the base case, 145–146; distribution of female and male gender parity and gaps, 32(fig.); enrollment analysis, 42; enrollment growth across levels, 112; enrollment rate expansion, 25; enrollment rate patterns, 27–28; incremental spending needs, 135–136; literacy in the adult population, 51; public spending, 44–45, 118; regionalization of country-level data, 25(box); role of economic development in expanding participation, 35. *See also* Regional data
- East Asia and the Pacific (richer): base case forecast for declining education spending, 85; distribution of female and male gender parity and gaps, 32(fig.); literacy in the adult population, 51; regionalization of country-level data, 25(box); years of education completed by adult populations, 49. *See also* Regional data
- Easterlin, Richard, 150
- Easterly, William, 143
- Economic development: development economics and development studies, 12; policymaking, 105; productivity and growth as benefit of education advance, 143–147; role in expanding participation, 35–36; sociopolitical and demographic benefits of education’s advance, 15
- Economic factors and consequences: affecting education supply and demand, 14; IFs economic model, 58–59; 68; socially excluded populations, 15(box); sociopolitical, demographic, and economic links to education, 11(fig.). *See also* Public spending
- Economic growth and well-being: aggregate impact of the normative scenario, 144–145; capability approach to development, 12–13; demographic transition shaping education progress, 33–34; economic and development benefits of education’s advance, 166; economic cost-benefit comparison of the normative scenario with the base case, 145–146; economic distribution within societies, 147–148; education and economic distribution across societies, 148–149; education–economic growth–mortality linkages, 153–154; estimating break-even point of costs of accelerating education’s advance, 147; global economic growth scenarios, 97(fig.); slow growth affecting participation and attainment rates, 165–167; uncertainties in forecasting, 97
- Education and Development: Measuring the Social Benefits* (McMahon), 71–72

Author Notes

Janet R. Dickson is a Research Associate at the Frederick S. Pardee Center for International Futures at the Josef Korbel School of International Studies, University of Denver. She has focused for many years on education research, analysis, and planning in a university setting, and has a particular interest in women's education and advancement.

Barry B. Hughes is Johns Evans Professor at the Josef Korbel School of International Studies and Director of the Frederick S. Pardee Center for International Futures, University of Denver. He initiated and leads the development of the International Futures (IFs) forecasting system.

Mohammad T. Irfan is a Post-Doctoral Fellow at the Frederick S. Pardee Center for International Futures at the Josef Korbel School of International Studies, University of Denver. His research focus is on long-term computer simulation of education systems around the world.

PATTERNS OF POTENTIAL HUMAN PROGRESS

VOLUME 2

ADVANCING GLOBAL EDUCATION

Janet R. Dickson, Barry B. Hughes, and Mohammad T. Irfan

“This look at the future—the potential for human progress—based on a massive collection of data and a rigorous projections model produces instructive scenarios of both likely and ideal trends in population, education finance, and education outcomes, including attainment and gender equity. This study can serve as a valuable guide for planning and policymaking in order to enhance the benefits and avoid pitfalls of anticipated trends. The study makes a strong case that investment in education today will return positive economic and social benefits tomorrow.”

—Annababette Wils, Research Director, and George M. Ingram, Executive Director,
Education Policy and Data Center, Academy for Educational Development

“A beautiful blend of data presentation and analysis for planning educational growth and its potential consequences.”

—Henry M. Levin, William Heard Kilpatrick Professor of Economics and Education, Teachers College, Columbia University
and Past President of the Comparative and International Education Society

“This volume presents an insightful, in-depth analysis of the outlook for global education and the implications of a more highly educated population on society. This provocative text is a must read for policymakers around the world.”

—Fred Swaniker, Founder and CEO, African Leadership Academy

Advancing Global Education is the second in a series of volumes that explores prospects for human development—how development appears to be unfolding globally and locally, how we would like it to evolve, and how better to assure that we move it in desired directions. The first volume addressed the reduction of global poverty. Questions that this volume addresses include:

- How rapidly are education enrollments and adult attainment levels advancing around the world?
- Which countries will hit the goal of universal primary education by 2015 and, for those that miss, when might they reach it?
 - How rapidly can countries realistically expect to reach the next big goal of universal lower secondary education?
- What are the financial costs of accelerating progress in enrollment and attainment, and do expected benefits ultimately exceed those costs?

Barry B. Hughes, series editor, is Director of the Frederick S. Pardee Center for International Futures and Professor at the University of Denver’s Josef Korbel School of International Studies. He is coauthor of numerous books and founder of the International Futures computer model accessible at www.ifs.du.edu.

Volume 1 in the series has received an “Essential” CHOICE review.
